OF

INTERSTATE CARRIER WATER SUPPLIES

BY

STATES AND PUBLIC HEALTH SERVICE REGIONS

AUGUST 1966

U. S. Department of Health, Education, and Welfare
Public Health Service
Division of Environmental Engineering and Food Protection
Washington, D. C. 20201

FORWARD

This publication supersedes the published Inventory of July 1963, (PHS Publication No. 1116) prepared by the Water Supply Section, Interstate Carrier Branch, Division of Environmental Engineering and Food Protection. It also marks the first time that the Inventory has been prepared for publication using the computer facilities of the Public Health Service located at the Robert A. Taft Sanitary Engineering Center.

Several years ago it became apparent that the processing of the data from which the Inventory was prepared, was considerably out of date by the time it could be collated, printed and distributed. As part of the Division's total effort to improve public water supplies, the inventory data handling has been converted in the past three years to computer techniques. To facilitate this, a twelve digit identification code has been devised which is adaptable to any public or private water supply within the country or its possessions. This code is printed immediately to the left of each water supply. Now that the computer program has been completed, it will be possible to issue an up-to-date inventory at six month intervals or upon demand.

It is also appropriate to announce that the data from which this Inventory is derived is being used with other computer programs to obtain selected data. Some of this material will be the subject of companion documents to this Inventory in the near future. It is hoped that such data can be put to practical use which will justify changes in operating procedures through the development of new concepts in design, operational practices, and surveillance procedures in water supply practice. The base has been laid through the introduction of laboratory results, and design and operating practice questionaires into the computer; it remains now as a challenge to those engineers who feel the need for dynamic approaches to the field of public water supply, to effectively utilize the data - of which this publication is only an administrative sub-part.

This Inventory lists the 775 supplies serving interstate carriers which have been classified as "Approved", "Provisionally Approved", or "No Current Report" on the date of recall from the computer, August 9, 1966.

Water supplies listed as "Approved" are in substantial compliance with the 1962 Public Health Service Drinking Water Standards. Those which are "Provisionally Approved" are classified as such, pending the correction of certain defects. Water supplies which are classified as "No Current Report" have been found acceptable at the time of the last survey report, but have been listed as "No Current Report" automatically because the bacteriological records have not been kept up-to-date. Water supplies which have been temporarily classified as "Use Prohibited" pending correction of major defects are not identified in this publication.

Statistics which summarize the inventory for each Public Health Service Region may be found at the end of each Regional listing. A national compilation may be found at the end of the Inventory.

Questions relating to this Inventory or inquiries regarding the general use of the design, operational, and quality data in the computer files of this Division should be directed to the appropriate Public Health Service Regional Office listed on the last page, or to:

Mr. Floyd B. Taylor, P. E.
Chief, Water Supply Section
Interstate Carrier Branch, DEEFP
Washington, D. C. 20201

It is our intention to serve the public interest in the area of potable water supply by assisting any legitimate study which could result in knowledge which would improve water treatment plant design or operation and water quality surveillance.

A great deal of thanks for the management of the computer programs goes to Messrs' Ed Diephaus, James Dening and George Hickman of the Computer Sciences Section, Sanitary Engineering Center, Cincinnati, Ohio, and the adaption of the computerized program and the production of this document has been the responsibility of Mr. James H. Eagen, P. E. of the Water Supply Program.

Richard S. Mark
Chief, Interstate Carrier Branch
Division of Environmental Engineering
and Food Protection
